

UNITED PIPELINE WELDTITE™ EF WELDED CONNECTION

For welded pipelines

WeldTite™ EF Welded Connection

United Pipeline's WeldTite™ EF welded connection allows for the connection of two thermoplastic lined sections of pipe without the use of flanges. The connection creates an end seal on the thermoplastic liner which is tested to over 9,000 psi and restrains thermoplastic liner ends from pull-out. All wetted materials are thermoplastic and the continuously smooth inside diameter of the connection makes it ideal for abrasive (slurry) applications.

Other Features

- US and international patents pending
- Installation and operation complies with pipeline codes: ASME B31.3, ASME B31.4, ASME B31.8 and ASME B31.11
